PROJECTING ON AN IDEAPAINT SURFACE

(yes, it's possible!)

We're constantly getting asked, "Can I project onto my IdeaPaint wall?"
The answer is yes. For our best practices and use tips, read the information below.

THE IDEAPAINT ADVANTAGE: WHY PROJECT ON YOUR WALL

Many of our customers use their IdeaPaint wall as a projection surface. They love it. **Projecting onto an IdeaPaint wall adds a layer of collaboration not possible with standard projection screens.**
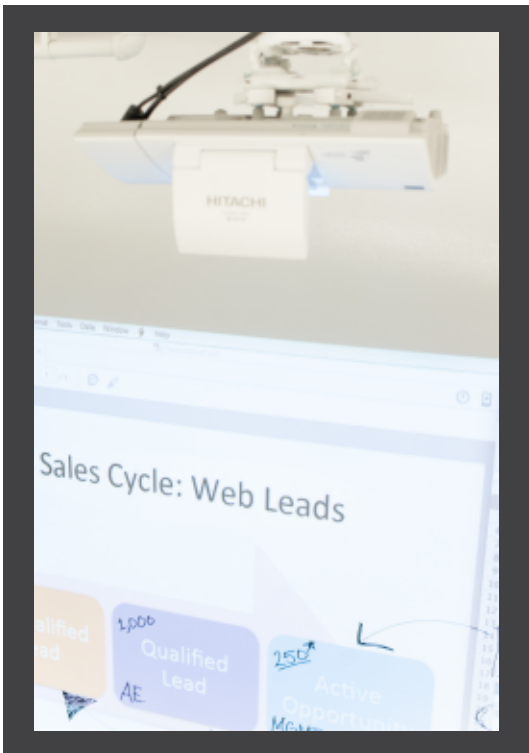

When projecting onto IdeaPaint, users experience the added benefit of being able to add drawings, notes, illustrations, next steps, diagrams, and markings in the moment to their presentation. The interactivity is engages the audience, and encourages participation in a way not possible with traditional screens.

TIPS & BEST PRACTICES:

For best results, use a short-throw projector.

- Short-throw projectors allow you to cast a clear, bright projection image on your IdeaPaint wall.
- Projecting from this distance and angle reduces bounce-back glare and eliminates hot spots.

You can also use a standard ceiling mounted or table-top projector.
